Customer Statement & System Requirements, Nathaniel Johnson

Customer Statement

Going to the movies should be simple and enjoyable, but buying tickets often feels frustrating and inconvenient. As a customer, I usually have to juggle multiple sources just to find out what movies are playing, what times are available, and whether decent seats are still open. When I arrive at the theater, I may find long lines, sold out movies, or unclear seating. If plans change, it is often difficult or impossible to adjust or review my purchase.

From my perspective, I expect a software system that lets me quickly see what movies are playing, choose a showtime, clearly view seat availability, and complete my ticket purchase before arriving at the theater. I want confidence that my seat is reserved, that pricing is clear, and that I can easily access my booking information later. A well designed system should save time, reduce uncertainty, and make the entire movie going smoother from start to finish.

Glossary of Terms

Term	Definition
Showtime	A scheduled date and time when a movie is shown in a theater
Seat Availability	The current status of seats that are open or already reserved for a specific showtime
Ticket Purchase	The process of reserving seats and paying for a movie showing
Booking Confirmation	A record, usually screen display or email, that confirms a completed ticket purchase
Administrator	A theater employee who manages movies, showtimes, pricing, and seating
Sales Summary	A report that shows ticket sales and attendance information

System Requirements

Functional

No.	Priority Weight	Description
REQ-1	High	Customers should be able to browse movies currently playing at the theater
REQ-2	High	Customers should be able to view available showtimes for each movie
REQ-3	High	The system should display real-time seat availability for each showtime

No.	Priority Weight	Description
REQ-4	High	Customers should be able to select specific seats before purchasing tickets
REQ-5	High	Customers should be able to purchase tickets online and receive confirmation
REQ-6	Medium	Customers should be able to view their booking history after logging in
REQ-7	High	The system should prevent double-booking of seats
REQ-8	Medium	Administrators should be able to add, edit, or remove movies
REQ-9	Medium	Administrators should be able to create and manage showtimes
REQ-10	Medium	Administrators should be able to manage seat layouts and ticket pricing
REQ-11	Low	Administrators should be able to view basic sales summaries

Nonfunctional

Category	Priority	Description
Functionality	High	The system must correctly reserve seats and process ticket purchases
Usability	High	The system should be easy to navigate for users with minimal technical skills
Reliability	High	The system should accurately always reflect seat availability
Performance	Medium	Pages should load within a few seconds under normal usage
Supportability	Low	The system should allow future updates such as promotions or loyalty programs

User Interface Requirements

UI-REQ	Priority	Description
UI-1	High	Movie browsing pages displaying movie titles, posters, and showtimes UI-2	High	Seat selection screen showing available and reserved seats visually UI-3	High	Ticket purchase and confirmation screen

UI-REQ	Priority	Description
UI-4	Medium	User login and account management page
UI-5	Medium	Administrator dashboard for managing movies and showtimes
UI-6	Low	Sales summary and reporting screen for administrators 
Plan of Work

- ✓ Project topic selected and approved
- ✓ Initial software project proposal completed and submitted
- Development environment set up (in progress)
- Database scheme design (in progress)
- User interface sketches and backend development (in progress)
