User Interface Specifications, Nathaniel Johnson

Preliminary Design

The user interface for the Movie Ticket Booking System that supports the customer login use case, browse movies and view showtimes use case, select seats use case, purchase tickets use case, and the admin add showtime use case is shown below. The mockups illustrate how users enter information, view results, and navigate between screens using buttons and links. These low fidelity wireframes are intended to demonstrate layout, input fields, and navigation paths rather than final visual appearance.

Use Case: Customer Logs In

Screen Flow:
Login Page → Customer Home (Movie List)

Description:
The customer enters a username/email and password in the login form and clicks the Log In button. If the credentials are valid, the system navigates to the Customer Home page. If the credentials are invalid, an error message is displayed. A Create Account option is also available for new users.

Navigation Path:
Landing Page → Login → Customer Home

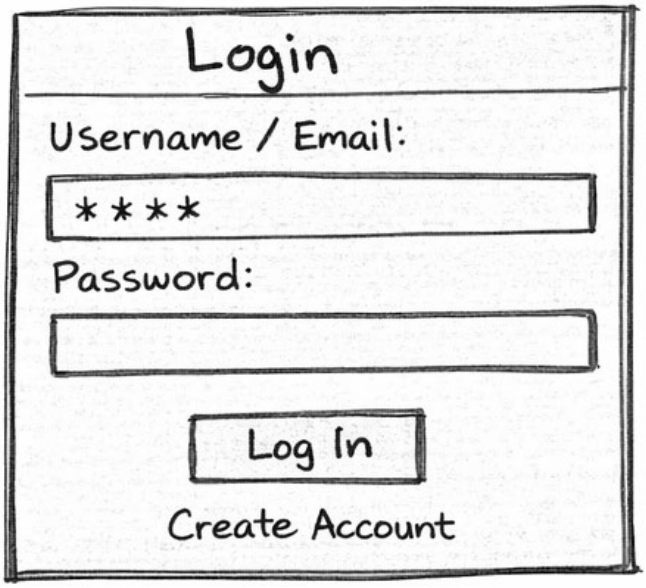

Figure 1: Login screen for customers to access their account or create a new account.

Use Case: Browse Movies and View Showtimes

Screen Flow:
Customer Home → Movie Details → Showtimes List

Description:
The customer clicks a movie title or poster from the movie list. The system displays movie details and available showtimes. The customer can select a showtime to continue.

Navigation Path:
Customer Home → Movie Details → Showtimes

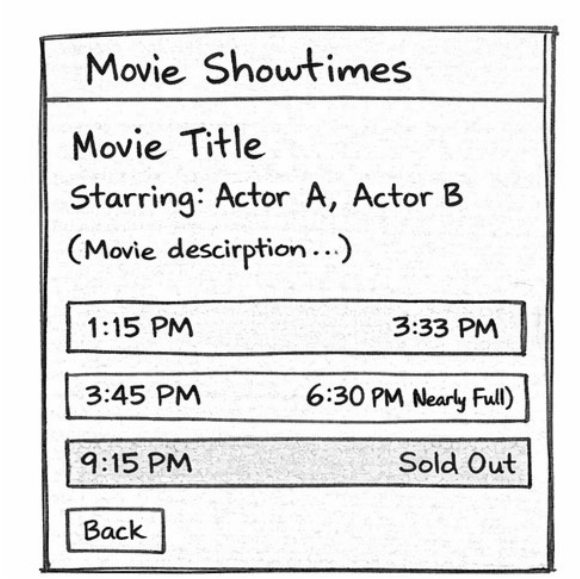

Figure 2: Movie showtimes screen displaying available and sold-out showtimes for a selected movie.

Use Case: Select Seats for a Showtime

Screen Flow:
Showtimes List → Seat Selection → Checkout Summary

Description:
The system displays a seat map for the selected showtime. Available and unavailable seats are visually distinguished. The customer selects seats and clicks Continue to Checkout.

Navigation Path:
Showtimes → Seat Selection → Checkout Summary

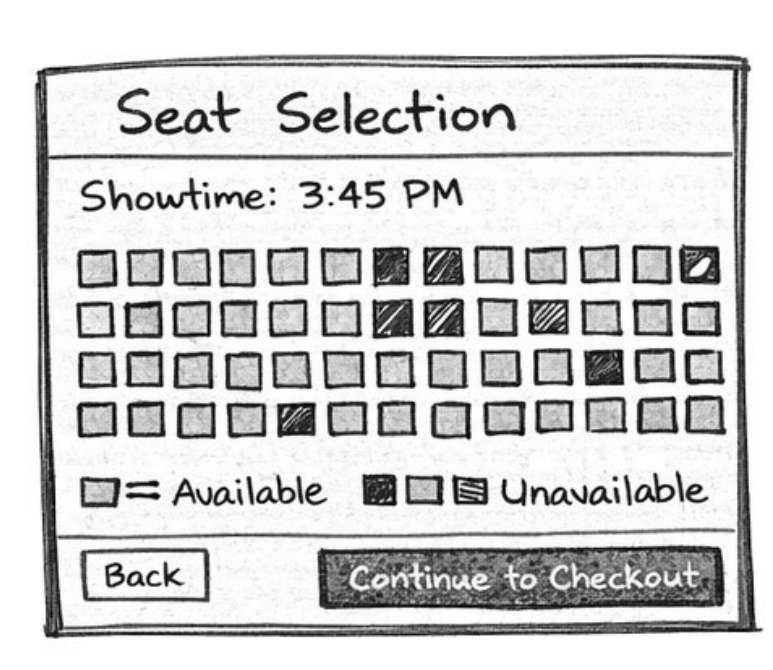

Figure 3: Seat selection screen showing available and unavailable seats for a chosen showtime.

Use Case: Purchase Tickets (Checkout and Confirmation)

Screen Flow:
Checkout Summary → Payment Form → Confirmation Screen

Description:
The customer enters payment information and clicks Pay Now. If payment is approved, the system displays a confirmation screen showing booking details. If payment fails, an error message is displayed.

Navigation Path:
Checkout → Payment → Confirmation

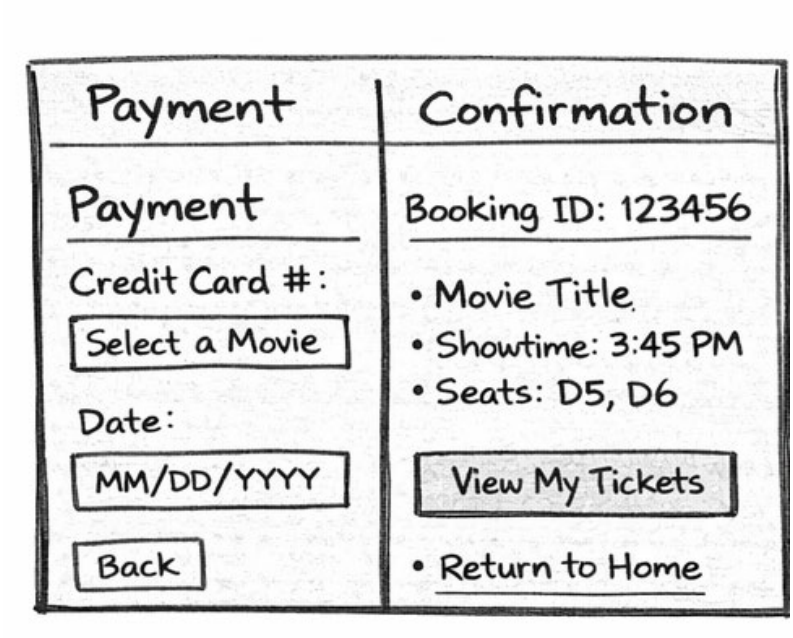

Figure 4: Payment form and confirmation screen displayed after successful ticket purchase.

Use Case: Admin Adds a Showtime

Screen Flow:
Admin Login → Admin Dashboard → Add Showtime Form → Success/Error Message

Description:
The admin selects a movie, auditorium, date, start time, and base price, then clicks Save Showtime. The system checks schedule conflicts and displays a success or error message.

Navigation Path:
Admin Login → Dashboard → Add Showtime → Dashboard

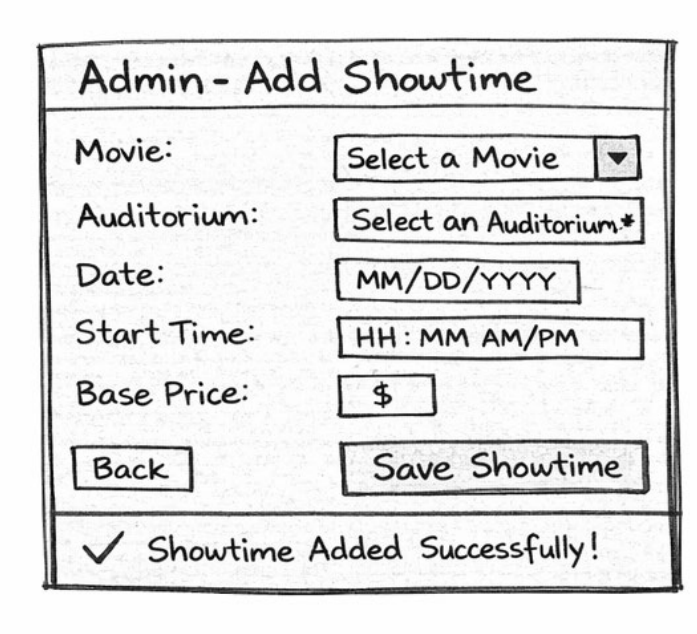

Figure 5: Admin interface for adding a new showtime to the system.

User Effort Estimation

Usage Scenario	Navigation	Clicks	Keystrokes
Customer logs in	Login → Customer Home	3	16
Browse movies & view showtimes	Home → Movie Details → Showtimes	3	0
Select two seats	Showtimes → Seat Map → Checkout	4	0
Complete ticket purchase	Checkout → Payment → Confirmation	9	23
Admin adds showtime	Admin Login → Dashboard → Add Showtime → Save	7	12

Example Breakdown – Customer Logs In

Click username field (1) + type username (8) + click password field (1) + type password (8) + click Log In (1)

Total Clicks: 3
Total Keystrokes: 16

Example Breakdown – Customer Purchases Tickets

Click movie (1) → click showtime (1) → click seat #1 (1) → click seat #2 (1) → click Continue to Checkout (1) → click card field (1) type card number (16) → click expiration field (1) type expiration (4) → click CVV field (1) type CVV (3) → click Pay Now (1)

Total Clicks: 9
Total Keystrokes: 23
